

**ELECTRIC
BICYCLE
WORLDTOUR**

Any night the sun can rise

ebwt.org

Basic facts:

Start: 5th June 2009
Olympic Stadium
Beijing, China

Finish: Summer 2012
Olympic Stadium
London, England

dolor • Guim Valls Teruel
16/11/1975
Barcelona, Spain

• Thuy Anh Nguyen
25/02/1979

Bicycle: Wisper 906 Alpino
Pedal assisted
25 km/h
250 W motor
1 battery 36V: 90 Km

Trailer: A Radical Design
trailer with a GI box
made in Kolkata.
Solar panel: 3x20W

Itinerary

“ A fix itinerary but open at the same time.

If you don't know exactly where are you going it is impossible to get lost”

- Guim Valls Teruel

The first ever attempt of a world tour on an hybrid solar electric bicycle

On 5th June 2009 EBWT (Electric Bicycle World Tour) started pedaling from the Beijing Olympic stadium with the objective to reach London by 2012.

The project aim is to raise environmental awareness, promoting alternative means of transport with less negative impact on the planet and alternative source of energies, like solar.

Any night the sun can rise!

The project started as a solo adventure, but after the first pass through Vietnam, Guim Valls Teruel, the soul and cyclist of the project, falls in love with a Hanoian TV journalist, Thuy Anh Nguyen, who interviewed him for VTV6, Vietnam National Television. Guim kept cycling and cross Cambodia, Thailand, Malaysia, New Zealand and Australia, before going

more on **2**

back a year later to marry her and ask her to be part of the project.

Nowadays the project is in India, where both of them have cycled from Kolkata to Varanasi, practised Vipassana in Sarnath, and now are arriving in New Delhi.

The project has done more than 18.000 km and visited 14 countries,

where people and the media have received it with great interest and have been able to test their bicycles and attend EBWT presentations at cultural centers, universities and other venues.

Electric bicycles are just bicycles where a motor has been attached to assist in the pedaling. The fact that they are a very well known and used

everywhere, makes them very interesting as a new means of transport for shorter or longer distances.

One of the most amazing things that EBWT has discovered, is what Guim calls "Electric smile", represented as :e)

An electric smile is the natural reaction that occurs within a person who rides an electric bicycle.

It is a reaction that occurs at the deepest level of the main and that it gets represented with a sincere smile, as one turns to feel like

superman when the power kicks in.

It makes one's life easier, without cutting out other possibilities like exercising while pedaling, or carrying heavy loads.
